

HCD Ceiling Internal Cladding System

HygienaClad

**Antimicrobial hygienic cladding
for all environments.**

HygienaClad HCD hygienic ceiling finish provides an easy to maintain surface for a wide range of environments.

Typical environments includes the following;

- Commercial Kitchens
- Food preparation
- Toilets
- Changing Facilities

With all the HCD products the surface finish is smooth, making it easily to clean and being U-PVC makes it impervious to moisture.

The hygienic ceiling system uses an interlocking 250mm plank system, that is available in a variety of lengths, the planks are typically 9mm thick and have a twin wall linked by fins to provide strength and rigidity. *Please Note : The Plank system is only available in White.*

The ceiling system can be mounted either directly to existing ceilings such as standard plaster / plasterboard/ ply ceilings, if the existing ceiling height is what is required. If the ceiling height needs to be lowered or fixing to a concrete slab then the new ceiling will be attached from the existing substrate on a Metal Framed (MF) grid system.

The plank system is attached to either the existing ceiling or the MF grid in the interlock between the planks so all fixings are invisible.

Where access is required into the ceiling void, Metal / Plastic access panels can be installed as part of the overall ceiling system.

The system has a range of trims which allow the system to be suitably finished, where the planks abut to the walls a two part perimeter trim is used, where the planks need to be joined over their length a H joint section is used.

The ceiling can be cleaned using a soft cloth and diluted mild detergent, where necessary stubborn marks can be removed using non-abrasive cream cleaners.

Once installed the Hygienic plank ceiling system can be hosed down in-situ where necessary.
